a Three distinct operations

MEASURE

What is observed?
Symptoms, time, income

→

PREDICT

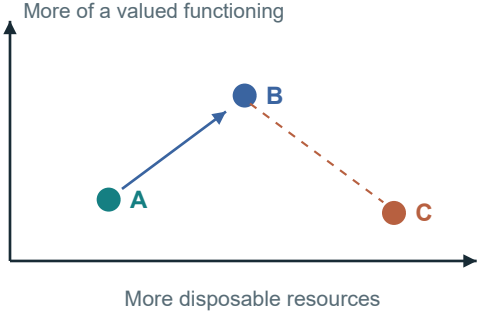

What changes under each option?
Population, comparator, horizon

→

APPRAISE

How does the difference matter?
Goals, constraints, preferences

b What the profile can and cannot order

B versus A

A dominance comparison is possible only when all relevant dimensions and uncertainty allow it.

B versus C

More resources and more functioning diverge. The graph alone cannot supply a preference.
