a Match the measure to the construct

Cognition and attention

Independent task performance
Perceived difficulty

Vision and skin

Relevant symptoms
Effects on daily activities

Physical capacity

Muscle function or strength
Activity limitations

Mental well-being

WHO-5: preceding two weeks
Not a diagnostic test

Metabolic indicators

Glucose or lipid measures
Only with a defined clinical role

Experience and agency

Enjoyment, distress, choice
Goals and actual discretion

b Keep causes, measurements and consequences separate

Exposure → **Observed state** → **Valued consequences**

Sleep schedule • diet • sitting → Symptoms • function • tests → Daily life • experience • agency
